- 주제** 세계 최초 3D 프린팅 식당  
**요약** 3D 프린팅 기술을 활용한 식당을 소개하는 글

listen to mp3

3D printing has become the 21st century's new tool. It is widely used in many businesses from art to aerospace. Now, 3D printing might bring a huge change in restaurants, too. There is a special restaurant in London, and it offers food made by 3D printers.

FoodInk is the world's first 3D printing restaurant. This restaurant is where food meets tomorrow's technology. Here, everything you touch is 3D-printed. The tables and chairs, forks and knives, and even the food! Chefs create fancy food with special 3D printing machines. Not only chefs but also artists, designers, and technologists all work together to make this possible. Some people think that the food might lack in nutrition. But there is no need to worry. The chefs carefully design the food to meet their customers' nutritional needs.

3D printing is an exciting technology for the food business. Who knows? In the near future, it might be common to find 3D printers in restaurants. We can only wait and see!
